

Bangalore Food Tourism

Coursera Capstone Project by M Karthick

Aim

To obtain and analyse data from Zomato and FourSquare on Bengaluru restaurants.

Zomato is an Indian food review aggregator similar to Yelp and Google ratings.

FourSquare is a location data aggregator.

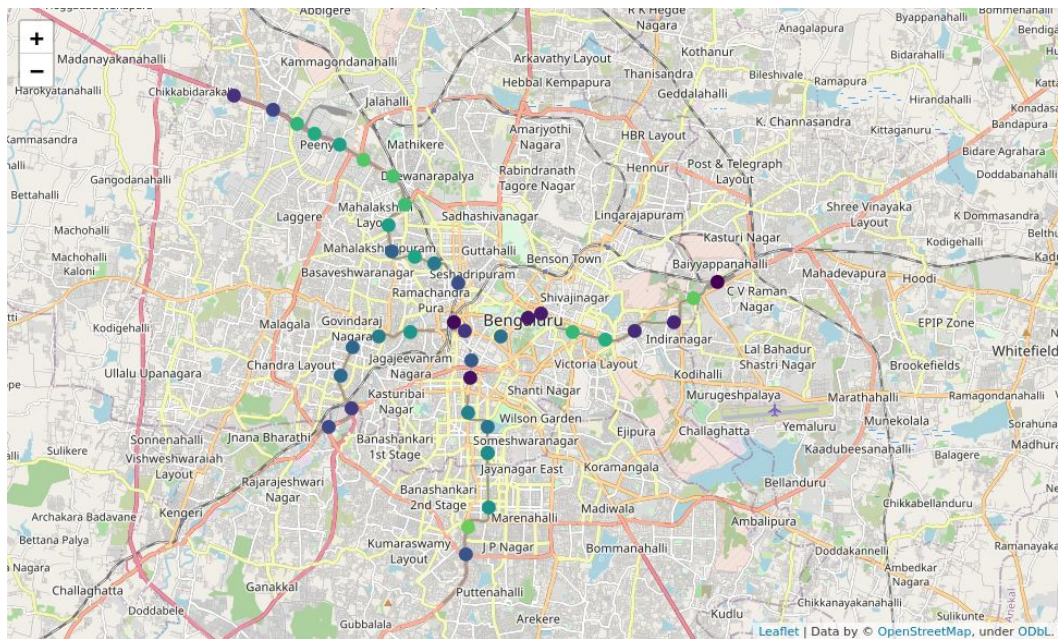

Bangalore Metro

Developed over the last decade, the current Metro Rail system in Bangalore covers a good portion of the city.

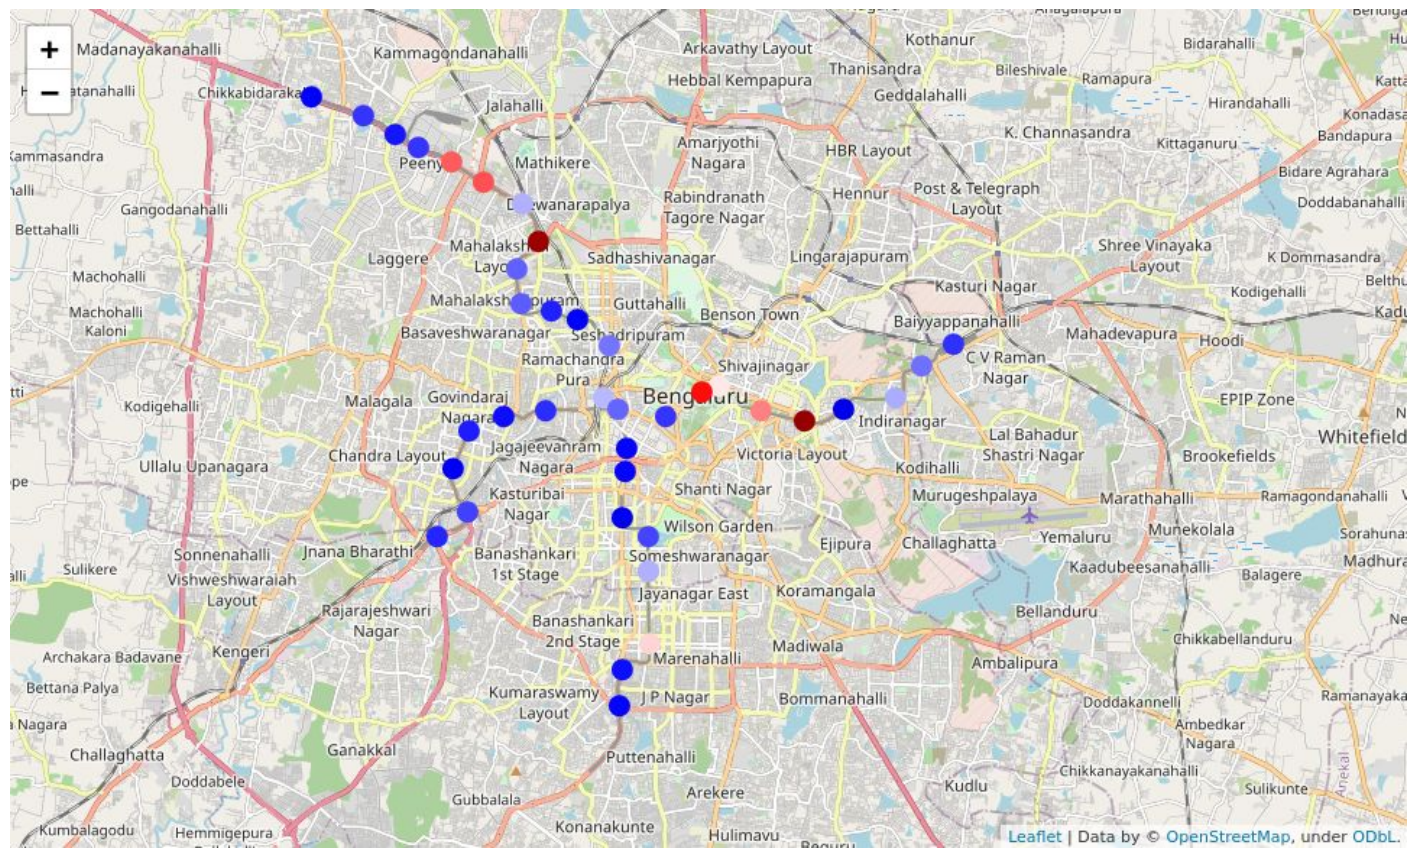

Since the city attracts people from all over the country, there is a wide variety of cuisines in the city's food culture.

The aim of this project is to analyse the numbers behind this culture to figure out the best places to eat by just traveling in the Metro.

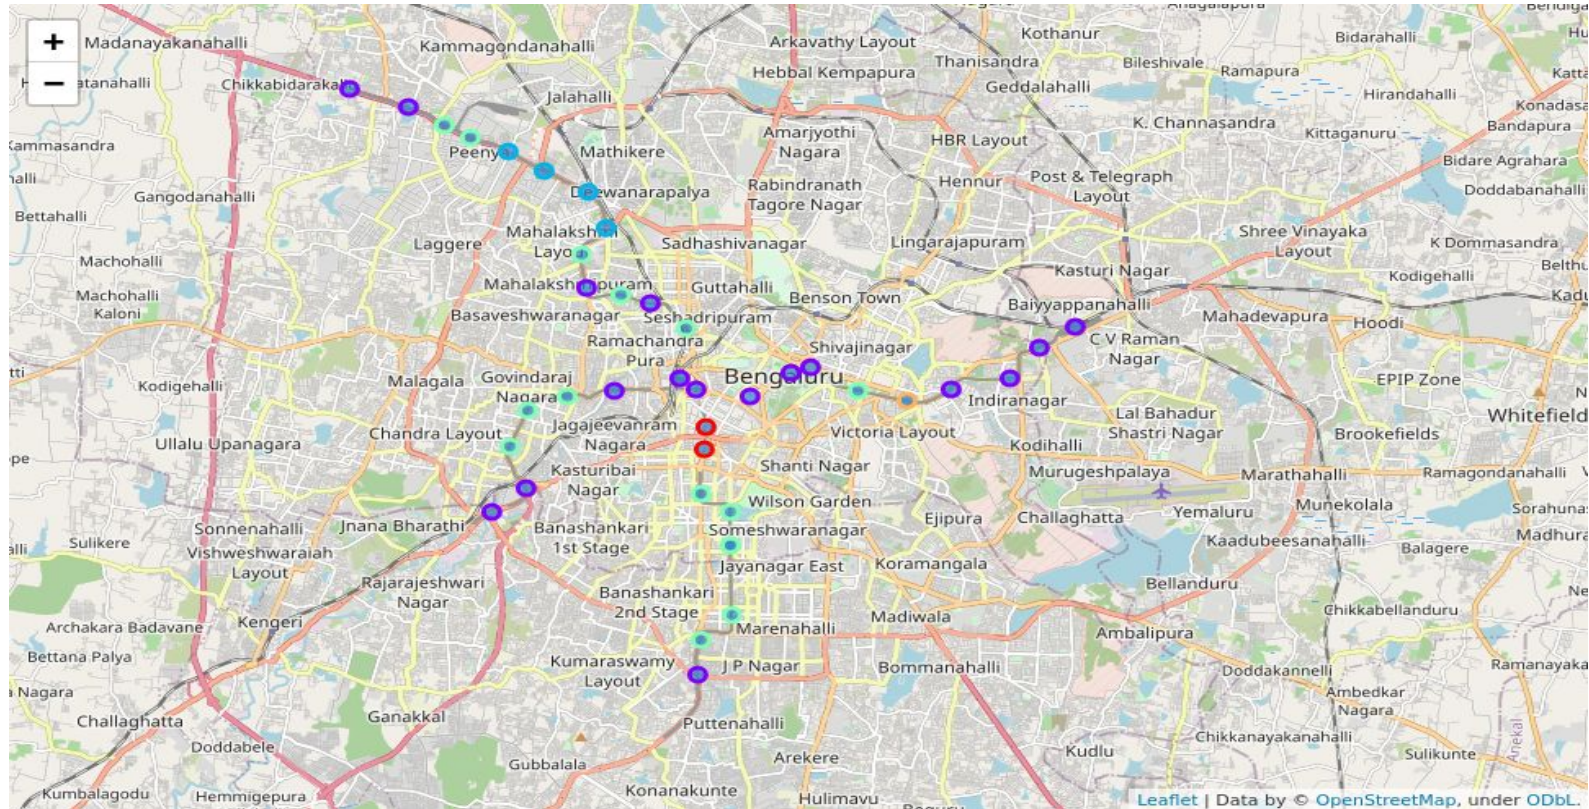

Ratings of Stations along the metro line.

Average costs

Clustering

Conclusion

There is a wide diversity of locations and cuisines available in Bangalore.

Any foodie will enjoy this Metro journey.

In the future, we can adapt this project to be more personalized based on a person's preferences like cuisine, cost, etc.
